

NEW

The New iQ 32 Cart

by Lock 'n' Charge Technologies

The new iQ 32 Cart incorporates the latest in design, technology, and functionality to make the use of tablet devices including Apple iPads (iPad 1 or iPad 2) in any environment more efficient. Sync, charge and secure up to 32 devices with the new iQ 32 Cart by Lock 'n' Charge Technologies.

- Charge and manage the downloading and synchronization of software applications (Apps) on your full set of iPads with the new Lock 'n' Charge Sync-Charge-Box (SCB) powered by the Cambrionix C3 Case.
- Two SCB's sit securely inside the Cart allowing you to sync up to 16 iPad devices each but can be optionally removed and conveniently used on a bench or in another location separate from the cart itself. (Available for purchase separately if additional units are required. Different versions are available to suit other devices on request).
- The Lock 'n' Charge iQ 32 Cart features two large-capacity lockable drawers on opposite sides. This allows users to retrieve and return iPads quickly.
- The iPads are stored in four removable and light-weight portable baskets. This allows users to carry pods of 8 iPads to different areas of a classroom easily and quickly.
- Device security is achieved by a digital electronic locking with PIN coded entry ensuring only those who have the code can access its contents.
- Cart Security is achieved with a heavy duty steel chain to lock the cart to the floor of the desired storage location.
- The Cart design is functional, sleek and stylish. It features an elegant outer shell with an iPad inspired top; stainless steel handles and smooth rolling wheels.
